IMPORTANT

General education core, program electives and program specific courses must be completed by each student in accordance with the associate degree nursing program of study in order to graduate. Prerequisite courses must be taken prior to entering the first nursing course and co-requisite courses must be taken prior to entering or along with a nursing course as documented in the degree plan.

Below is the list of the prerequisite and co-requisite courses for the two programs of study in the Associate Degree Nursing Program. If prerequisite courses are not successfully completed with a grade of “C” or better, students may not enter the associate degree nursing program. If co-requisite courses are not completed according to the degree plan with a grade of “C” or better students will not be allowed to progress in the associate degree nursing program. Students who do not complete the co-requisite courses as documented in the program of study will be required to withdraw from the associate degree program and follow the readmission policy once the co-requisite course has been completed. Co-requisite courses must be completed, in order of priority, as they are presented on the degree plan to progress in the associated degree nursing program.

Applicants and students must successfully complete (with a C or better) all of the nursing prerequisite, co-requisite and program specific courses. See “How to Apply to the Associate Degree Nursing Program” for more information on the selection process and ranking of prerequisite and co-requisite courses for admission into the associate degree nursing program.
