

Technological Literacy

August 2025

Hello Falcons,

The World Economic Forum's [Future of Job's Report](#) has identified 10 important skills that will be needed to succeed in your career by 2030. To help support you in developing these critical skills, we've identified learning material that we'll share with you regularly.

Level Up Your Tech Skills

In the modern world, almost every job requires some level of technological literacy. Whether it's using a basic software like Microsoft Office or more complex programming skills, being technologically literate can open up a wide range of opportunities for personal growth. Technological literacy equips people with the tools to find and assess information and to understand and solve problems more effectively.

To get you started, here are some questions to get you thinking about this topic:

1. How confident am I in my ability to learn new technology?
2. Can I effectively communicate using digital platforms?
3. Do I understand the basics of online safety and privacy?
4. How well can I evaluate the credibility of online information?
5. How have my technological skills improved over the past year?

Assess your current proficiency level using one of our Skill Benchmark assessments or jump right into learning with the featured assets we've handpicked for this topic.

SKILL UP TO UNLEASH YOUR EDGE.
